

1

OVERVIEW

Target species / taxon

e.g. *Fagus sylvatica*

Author(s)

Last, First initial

Geographic extent / study area

e.g. Europe, Alps

Modelling objective

e.g. mapping, scenario, invasion risk, conservation

Temporal scope

e.g. 1990-2020, future 2050 SSP2-4.5

2

DATA

Occurrence type:

☐ Presence-only

☐ Presence-absence

☐ Abundance

☐ Count

No. of occurrence records

e.g. 1 245 presences

Occurrence data source(s)

e.g. GBIF, national atlas

Absence / background handling

e.g. random bg, target-group, true absences

Environmental predictors

e.g. BIO1, BIO12, land cover

Spatial resolution

e.g. 1 km, 30 arc-sec

Collinearity treatment

e.g. VIF <10, PCA, none

3

MODEL

Modelling algorithm(s)

e.g. MaxEnt, BRT, GLM, RF, ensemble

Software / R package

e.g. biomod2, dismo, ENMTML

Complexity / regularisation

e.g. regularisation mult., tree depth

Cross-validation strategy

e.g. random k-fold, spatial block, LOOCV

Sampling bias correction

e.g. spatial thinning, target-group bg, none

4

ASSESSMENT

Performance metrics:

☐ AUC

☐ TSS

☐ Boyce/CBI

☐ RMSE

☐ Kappa

Other:

Metric values (mean +/- SD)

e.g. AUC = 0.85 +/- 0.03

Threshold method

e.g. max TSS, 10th percentile

Uncertainty quantification

e.g. ensemble spread, bootstrap CI, none

5

PREDICTION

Output type:

☐ Continuous suitability

☐ Binary presence/absence

☐ Abundance / richness

Projection scenario(s)

e.g. current, SSP1-2.6, SSP5-8.5, 2070

Transfer / extrapolation region

e.g. same region, novel climate space

Key caveats / limitations

e.g. dispersal ignored, biotic interactions not modelled

Additional notes / references
